

PROJECT DESIGN – PHASE II

Solution Requirements, Data Flow Diagram & User Stories

Date	30 September 2026
Team ID	SWTID-2026-8983
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	4 Marks

Functional Requirements

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Field-Based Record Access	Check the selected record field before granting access.
FR-2	Script-Controlled ACL	Execute ACL script and return allow/deny decision.
FR-3	Role & Permission Check	Consider user role/permission together with the field condition where required.
FR-4	Access Denial	Prevent unauthorized users from opening restricted records.

Non-Functional Requirements

NFR No.	Requirement	Description
NFR-1	Usability	Access behavior should be simple and understandable.
NFR-2	Security	Unauthorized record access must be prevented.
NFR-3	Reliability	ACL should consistently apply the defined rule.
NFR-4	Performance	Script should execute without noticeable access delay.
NFR-5	Availability	Access control should work whenever the ServiceNow application is available.
NFR-6	Scalability	Rule should remain maintainable as records and users increase.

Data Flow Diagram – Level 0 (Text Representation)

User → ServiceNow Application → Record Access Request → Script-Controlled ACL → Field Value Check → Allow / Deny → User

The user sends an access request. The ServiceNow application passes the request to the ACL. The ACL checks the relevant record field and user permission, then returns an allow or deny decision.

User Stories

User Type	Functional Requirement	User Story No.	User Story / Task	Acceptance Criteria	Priority	Release
ServiceNow User	Record Access	USN-1	As a user, I want to open a record when its field value satisfies the access rule.	Authorized record opens.	High	Sprint-1
ServiceNow User	Restricted Access	USN-2	As a user, I want restricted records to be blocked when the field condition is not satisfied.	Unauthorized record is denied.	High	Sprint-1
Administrator	ACL Management	USN-3	As an administrator, I want a clear scripted rule that can be maintained and tested.	ACL rule is configurable and testable.	Medium	Sprint-2
