

FUNCTIONAL & PERFORMANCE TESTING PHASE

Model Performance Test

Date	30 September 2026
Team ID	SWTID-2026-8983
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	4 Marks

Test Scenarios & Results

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	Allowed field value	Open a record whose field value satisfies the ACL condition.	Access is granted.		
FT-02	Restricted field value	Open a record whose field value does not satisfy the ACL condition.	Access is denied.		
FT-03	Role and field validation	Test authorized and unauthorized roles with different field values.	Access follows the defined ACL rule.		
FT-04	Empty / missing field	Try to access a record where the controlling field is empty or unavailable.	Unsafe access is not granted; rule handles the case correctly.		
PT-01	Response Time Test	Measure time taken to open a record with the ACL enabled.	Record access completes without noticeable delay.		
PT-02	ACL Speed Test	Open multiple records and observe ACL processing.	System should not slow down significantly.		
PT-03	Concurrent Access Test	Test access from multiple users with different permissions.	Each user receives the correct allow/deny result.		

Test Execution Note

Actual Result and Pass/Fail columns are intentionally left blank so the team can enter the results after executing each test case in the ServiceNow environment.
